

# FACT SHEET

UNITED STATES AIR FORCE

## Civil Engineer Maintenance, Inspection and Repair Team

The Field Support Directorate, known as the Civil Engineer Maintenance, Inspection and Repair Team (CEMIRT), provides intermediate and depot-level repair support on power generation, electrical distribution, aircraft arresting systems and technical support for heating, ventilating and air conditioning (HVAC) systems.

The directorate has two offices, one located at Tyndall AFB, Fla. and a geographically separated unit at Travis AFB, Calif.

The Directorate's newest division, the Supervisory Control and Data Acquisition (SCADA) team, was established in 2004. This division consists of experts in electronic industrial controls, electrical/electronic equipment, system integrators and electrical systems that provide remote monitoring and control of core utility equipment and systems such as dispersed emergency backup generator sets, water/waste water systems and electrical distribution equipment.

CEMIRT also has specialized Prime BEEF teams that provide commanders with power production and electrical expertise during wartime, humanitarian operations, natural disasters and operations other than war.

*The Air Force Civil Engineer Support Agency is a field operating agency that reports to the Office of the Civil Engineer of the Air Force at Headquarters U.S. Air Force, Washington, D.C. The Agency provides tools, practices and professional support to Air Force civil engineers worldwide. Visit our website at <http://www.afcesa.af.mil>.*
